## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application.

## **Listing of Claims:**

1. (Currently Amended) A double-sided metallic laminate comprising a metallic layer at one side, a resin layer of a low expansion polyimide having a thermal expansion coefficient of 5x10<sup>-6</sup> to 2.5x10<sup>-5</sup>/°C, a resin layer of a thermoplastic polyimide and a metallic layer at the other side, wherein the thermoplastic polyimide has a glass transition temperature of 200 to 250 °C and is a copolymer including the following formula 2a, formula 2b, formula 2c and formula 2d:

## [formula 2a]

## [formula 2b]

$$+N = CH_3 = CH$$

## [formula 2c]

$$-t \stackrel{\circ}{\underset{\circ}{\bigvee}} X_3 \stackrel{\circ}{\underset{\circ}{\bigvee}} 0 \stackrel{\circ}{\underset{\circ}{\bigvee}} 1_m$$

## [formula 2d]

$$-f \stackrel{\bigcirc{}}{\underset{\bigcirc{}}{\bigvee}} X_3 \stackrel{\bigcirc{}}{\underset{\bigcirc{}}{\bigvee}} N - X_{\overline{2} \stackrel{1}{\underset{\bigcap{}}{\bigcup}} n}$$

# in which, $k \ge 1$ , $\ell$ , m, n ≥ 0, $\ell$ =m=n ≠ 0, $k \ge \ell$ , $k+\ell$ > 1.5(m+n) and $k+m > 1.5(\ell +n)$ ,

X<sub>2</sub> is at least one selected from the group consisting of

 $\underline{Y_2}$  and  $\underline{Y_3}$  are each independently or simultaneously -, -O-, -CO-, -S-, -SO<sub>2</sub>-, -C(CH<sub>3</sub>)<sub>2</sub>- or -CONH-,

$$X_3$$
 is or  $Y_4$ , and  $Y_4$  is -, -O- or -CO-.

2. (Currently Amended) The double-sided metallic laminate according to claim 1, wherein the low thermal expansion polyimide is the following formula 1[[.]]:

## [formula 1]

$$\begin{array}{c|c} & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & & \\ & & \\ & & & \\ & &$$

in which, p>1, q>0 and  $p/q=0.4\sim2.5$ ,

$$X_1$$
 is  $X_1$  is -O- or -CO-.

- 3. (Canceled)
- 4. (Canceled)

5. (Currently Amended) The double-sided metallic laminate according to claim [[4]]  $\underline{1}$ , wherein the thermoplastic polyimide is the formulae 2a to 2d, in which m, n= 0 and  $X_2$  is the following formula 3.

## [formula 3]

$$- \hspace{-1.5cm} \begin{array}{c} \hspace{-1.5cm} - \hspace{-1.5cm} \hspace{-1.5cm} \hspace{-1.5cm} \hspace{-1.5cm} \hspace{-1.5cm} - \hspace{-1.5cm} \hspace{-1.5c$$

6. (Currently Amended) The double-sided metallic laminate according to claim [[4]]  $\underline{1}$ , wherein the thermoplastic polyimide is the formulae 2a to 2d, in which m, n=0 and  $X_2$  is the following formula 4.

## [formula 4]

- 7. (Original) The double-sided metallic laminate according to claim 1, wherein the metallic layer is formed of copper.
- 8. (Currently Amended) The double-sided metallic laminate according to claim 1, which further comprises a <u>polyimide</u> resin layer <u>for improving adhesion with a metal-of a polyimide</u> between the metallic layer at one side and a <u>the</u> resin layer of a <u>the</u> low expansion polyimide <del>for improving adhesion with a metal</del>.
- 9. (Original) The double-sided metallic laminate according to claim 8, wherein the polyimide for improving adhesion with a metal is a polyimide having a -NH- functional group introduced.
- 10. (Currently Amended) The double-sided metallic laminate according to claim 8, wherein the polyimide for improving adhesion with a metal is a polyimide having the following formula 5 introduced[[.]]:

#### [formula 5]

11. (Currently Amended) The double-sided metallic laminate according to claim [[1]] 8, wherein the polyimide for improving adhesion with a metal is a copolymer including the formula 2a, formula 2b, formula 2c and formula 2d.

12. (Currently Amended) A method for manufacturing a double-sided metallic laminate comprising simultaneously or sequentially applying a precursor of a low thermal expansion polyimide having a thermal expansion coefficient of 5x10-6 to 2.5x10-5/°C 5x10-6 to 2.5x10-5/°C and a precursor of a thermoplastic polyimide on a metal foil to form one side of the double-sided metallic layer, followed by drying and curing, and laminating another metal foil on the resin layer of a thermoplastic polyimide of the resulting one-sided metallic laminate comprising a metal foil layer, a resin layer of a low expansion polyimide and a resin layer of a thermoplastic polyimide, which are sequentially laminated, to form the other side of the double-sided metallic laminate;

wherein the thermoplastic polyimide has a glass transition temperature of 200 to 250°C; wherein the precursor of a thermoplastic polyimide is a copolymer including the following formula 7a, formula 7b, formula 7c and formula 7d:

#### [formula 7a]

## [formula 7b]

$$\begin{array}{c|c} H & O \\ \hline -H & O \\ \hline O & H \\ \hline -HO & O \\ \hline O & H \\ \hline -HO & O \\ \hline O & H \\ \hline -N-X_2-J_i \\ \hline O & O \\ \hline O & O \\ \hline -HO & O \\ \hline O & O \\ \hline -HO & O \\$$

#### [formula 7c]

$$\begin{array}{c|c} H & O & H \\ \hline + N & & N \\ \hline + O & & O \\ \hline O & O \\ \hline O & O \\ \hline \end{array}$$

[formula 7d]

$$\begin{array}{c|c} H & O & H \\ \hline + N & N - X_2 - J_n \\ HO & O \\ \end{array}$$

 $\frac{\text{in which, } k \geq 1, \ \ell \ , \ m, \ n \geq 0, \ \ell \ = m = n \neq 0, \ k \geq \ell \ , \ k + \ell \ > 1.5(m + n) \ and}{k + m > 1.5(\ell + n),}$ 

 $X_2$  is at least one selected from the group consisting of

 $\underline{Y_2}$  and  $\underline{Y_3}$  are each independently or simultaneously -, -O-, -CO-, -S-, -SO<sub>2</sub>-, -C(CH<sub>3</sub>)<sub>2</sub>- or -CONH-,

$$X_3$$
 is or  $Y_4$ , and  $Y_4$  is -, -O- or -CO-.

13. (Currently Amended) The method according to claim 12, wherein the precursor of a low thermal expansion polyimide is a copolymer of the following formula 6[[.]]:

[formula 6]

in which, s>1, t>0 and  $s/t=0.4\sim2.5$ ,

$$X_4$$
 is  $X_5$  is -, -O- or -CO-.

- 14. (Canceled)
- 15. (Canceled)
- 16. (Currently Amended) The method according to claim [[15]] 12, wherein the precursor of a thermoplastic polyimide is the formulae 7a to 7d, in which m, n=0 and  $X_2$  is the formula 3.
- 17. (Currently Amended) The method according to claim [[15]]  $\underline{12}$ , wherein the precursor of a thermoplastic polyimide may be the formulae 7a to 7d, in which m, n=0 and  $X_2$  is the formula 4.
- 18. (Currently Amended) The method according to claim 12, wherein the precursor applied on the metal film at one side of the double-sided metallic layer is a precursor of a polyimide for improving adhesion with a metal, precursor of a low thermal expansion polyimide having a thermal expansion coefficient of 5x10-6 to 2.5x10-5/°C and a precursor of a thermoplastic polyimide A method for manufacturing a double-sided metallic laminate comprising simultaneously or sequentially applying a precursor of a polyimide for improving adhesion with a metal, a precursor of a low thermal expansion polyimide having a thermal expansion coefficient of 5x10-6 to 2.5x10-5/°C and a precursor of a thermoplastic polyimide on a metal foil to form one side of the double-sided metallic layer, followed by drying and curing, and laminating another metal foil on the resin layer of a thermoplastic polyimide of the resulting one-sided metallic laminate comprising a metal foil layer, a resin layer of a low expansion polyimide and a resin layer of a thermoplastic polyimide, which are sequentially laminated, to form the other side of the double-sided metallic laminate wherein the thermoplastic polyimide has a glass transition temperature of 200 to 250°C;

## wherein the precursor of a thermoplastic polyimide is a copolymer including the following formula 7a, formula 7b, formula 7c and formula 7d:

## [formula 7a]

$$\begin{array}{c|c} H & O \\ \hline + N \\ HO \\ \hline \end{array} \\ \begin{array}{c} CH_3 \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} H \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} H \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} I_K \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} I_K \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} I_K \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} I_K \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} I_K \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} I_K \\ \hline \end{array} \\ \begin{array}{c} O \\ \hline \end{array} \\ \begin{array}{c} I_K \\ \end{array} \\ \begin{array}{c} I_K$$

## [formula 7b]

$$\begin{array}{c|c} H & O \\ \hline + N & O \\ \hline + O & CH_3 \\ \hline O & CH_3 \\ \hline O & O \\$$

## [formula 7c]

$$\begin{array}{c|c}
H & O & H \\
\hline
HO & N & O \\
O & O \\
O & O \\
\end{array}$$

## [formula 7d]

$$\begin{array}{c|c} H & O & H \\ \hline -N & N - X_{2} \end{bmatrix}_{n}$$

$$HO \longrightarrow O \qquad O$$

<u>in which, k≥ 1, ℓ, m, n≥ 0, ℓ =m=n≠ 0, k≥ ℓ, k+ℓ > 1.5(m+n) and</u> <u>k+m > 1.5(ℓ +n),</u>

 $X_2$  is at least one selected from the group consisting of

 $\underline{Y_2}$  and  $\underline{Y_3}$  are each independently or simultaneously -, -O-, -CO-, -S-, -SO<sub>2</sub>-, -C(CH<sub>3</sub>)<sub>2</sub>- or -CONH-,

$$X_3$$
 is or  $Y_4$ , and  $Y_4$  is -, -O- or -CO-.

- 19. (Currently Amended) The method according to claim [[12]] 18, wherein the precursor of a polyimide for improving adhesion with a metal is a precursor of a polyimide having a -NH- functional group introduced.
- 20. (Currently Amended) The method according to [[12]] 18, wherein the precursor of a polyimide for improving adhesion with a metal is a precursor of a polyimide having the formula 5 introduced.
- 21. (Currently Amended) The method according to [[12]] 18, wherein the precursor of a polyimide for improving adhesion with a metal is a copolymer including formula 7a, formula 7b, formula 7c and formula 7d.
